

Strong and durable

PipeX plastic composite Gas Pipe consists of five layers including cross-linked polyethylene (PEX) and aluminium. This, combined with solid brass

DR (Dezincification Resistant) fittings, creates a high-performance, strong, clean gas pipe line with no oxygen diffusion. DR prevents the need to wrap the fittings which are in contact with water in the pipe system. Easy to install, the pipe complies with Australian Standards and gas authority requirements.

Clean and green

Awarded the National Green Plumber's Association Judges Choice for the Highly Commended Product of the Year, the

BioLytx Wastewater Treatment System uses one tenth of the energy of a conventional system. Compact and easy to install, the system boasts a back-to-base alarm and can take sanitary items as well as food waste. Grease traps are not needed for the system, which only requires one annual service.

Positive pressure

Developed as an alternative to relief venting, the Studor P.A.P.A.™ – Positive Air Pressure Attenuator – is designed to protect multi-storey buildings against unwanted positive pressures (back pressure/positive transients) generated in a plumbing system at the point of need. The intelligent product allows multi-storey building designers to simplify the design of sanitary waste systems. When installed in conjunction with a Studor Maxi-Vent™, the P.A.P.A. becomes a positive and a negative protection device.

Pump power

Waterco has added the Portapac premium to its range of Portapac centrifugal spa pool pumps. These pumps, which heat and circulate water through spa jets, feature a built-in electric heater and electronic controls. The Portapac premium boasts three additional options, which can be controlled via a digital control panel, including a sanitizer outlet to which a UV light or ozonator can be connected, a light outlet, and an auxiliary outlet for electrical equipment.

Stop the flow

Designed by a plumber for plumbers, the Flowstopper™ plugging device assists plumbers when cutting out and repairing broken copper water pipes by stopping the residual flow of water on the outlet side of a water meter or other control valve. The device also lets the user oxy acetylene weld while the high temperature-resistant stainless steel hose remains in the pipe.

Expanded range

Water Jetting Nozzle manufacturer ENZ has expanded its range of chain scrapers to include small-diameter pipe cleaning. The New ENZ 10.028 1/4" chain scraper, available through SECA, includes a rotating front blade and chain sets from 40 to 100mm. Working on a minimum flow of 20L/min and a maximum pressure of 275bar (4000psi), this nozzle is ideal for removing roots, encrustations and concrete residues.

Intelligent hot water

Designed to significantly reduce the cost of going solar, the new domestic Dux Sunpro 305 gas hot water system features an energy management system called Hotlogic, which removes the usual need for solar heating to be boosted by a continuous-flow gas heater attached to the outside of the tank. Heating boost is instead provided by inexpensive gas burners, controlled by Hotlogic and contained inside one of Dux Hot Water's gas hot water storage tanks. Hotlogic senses the amount of solar energy available to the solar collectors on the roof and monitors water temperature inside the tank.
